An experienced, dynamic, and detail-oriented Web Developer with a track record of architecting performant, scalable, and reliable websites and web applications. Specializes in creating delightful, fully responsive user-centered web experiences while adhering to project constraints and technical limitations. Enjoys providing expert technical direction, communication, and feedback to business stakeholders with a knack for explaining highly technical concepts to non-technical individuals. Although capable of working autonomously and self-initiated, excels in collaborative agile team environments. Embraces continuous learning of new technologies, frameworks, and methodologies, and strongly advocates mentoring and knowledge sharing among peers.

Design Tools

XD	Sketch
Illustrator	Photoshop
Affinity Designer	

Lead Application Developer

May 2019 - Current

Citizens Bank, Charlotte, NC

- <> Spearheaded a team of ~6 to conceptualize and effectively implement a CI/CD process for distributing reusable web components to internal teams as NPM packages hosted in a private Nexus repository.
- <> Developed seed package solutions for new projects utilizing Yarn and Gulp to enable rapid project start up times and encourage clean, well organized, and structured code.
- <> Implemented a cadence for peer code reviews on multiple teams by communicating the importance of adding reviewers to all pull requests and encouraging peers to actively participate in daily code reviews.
- <> Effectively scope and timeline technical front-end projects to enable accurate budgeting and resource allocation by meeting with project stakeholders to identify key business objectives and communicating any technical constraints or limitations.

UI/UX Developer

June 2017 - May 2019

Live Oak Bank, Wilmington, NC

- <> Initiated and led development of a large-scale refactor to align code bases with current Web 2.0 standards, increasing scalability and decreasing verticalized product launch times by ~50%.
- <> Managed weekly deployments to multiple AWS ec2 environments through collaborative automated testing with the QA team and implementing git-based feature deployment pipelines within the web development team.
- <> Integrated RESTful API calls, designed and built interactive widgets/calculators, and adhered to industry best practices for creating modular and reusable code.

Web Developer/Digital Marketing

Sept 2011 - June 2017

Freelance, Wilmington, NC

- <> Designed, built, and deployed a large scale custom e-commerce solution resulting in an averaged 36% increase in monthly revenue over the previous platform.
- <> Accurately developed the scope and timelines for branding, design, and web development services for local business clients while providing expert technical direction and communication.
- <> Organized and executed organic SEO audits, adjustments and full overhauls of existing and new digital materials, including full website analytical reporting, traffic assessments, and providing actionable strategic recommendations.
